

SOLYSTIC

a **NORTHROP GRUMMAN** company

Our SOSi™ simulation tool provides extra value and flexibility.

We are today proposing an innovative approach to create a digital companion of intralogistics platforms and complete Supply Chain simulation. SOSi™ uses your actual process data - flows, stocks, sub-contracting and transport - and plans ahead for optimization scenarios to simplify your transition to the Industry of the Future. Model management can be used to then assess impacts and benefits. Sustainability, flexibility and profitability... innovating only makes sense if it is useful.

This is how we see innovation at SOLYSTIC.
