

SOLYSTIC

a **NORTHROP GRUMMAN** company

OUR AGILITY IN THE SERVICE OF INTRALOGISTICS

Useful innovation

SOLYSTIC is a global leading provider for **automation** of **intralogistics**, especially for parcels, postal and retail industries.

We have broad capabilities in intralogistics process design, program management and integration, sorting equipment, real-time image and data mining, mobile robotics, lifecycle services (maintenance, spares supply chain, technical support) and "Digital twin" data modelling.

We enable our customers to automate logistics processes, reducing manual operation needs, improving working conditions and the quality of service.

We provide bespoke solutions, based on smart combinations of sorting technologies, mobile robotics and IT applications.

High-productivity integrated sorting factories

for parcels, B2C products and mail. Combining in a single facility sorting equipment, mobile robots for containers handling and IT for process supervision, we enable to sort products for a high number of destinations in a reduced footprint and with a high level of automation and process accuracy. For example, up to 1,000,000 objects per day sorted into 10,000 delivery walks, ready for delivery.

Sorting equipment with automatic containers handling

The solutions **CST** for B2C products, **XMS**™ for mixed mail, **TOP2000** for flat mail and small packages, coupled with **Soly**™ robots for a full automation of containers handling, ensure high productivity, scalability and easiness of deployment over a logistics network.

Applications based on mobile robotics

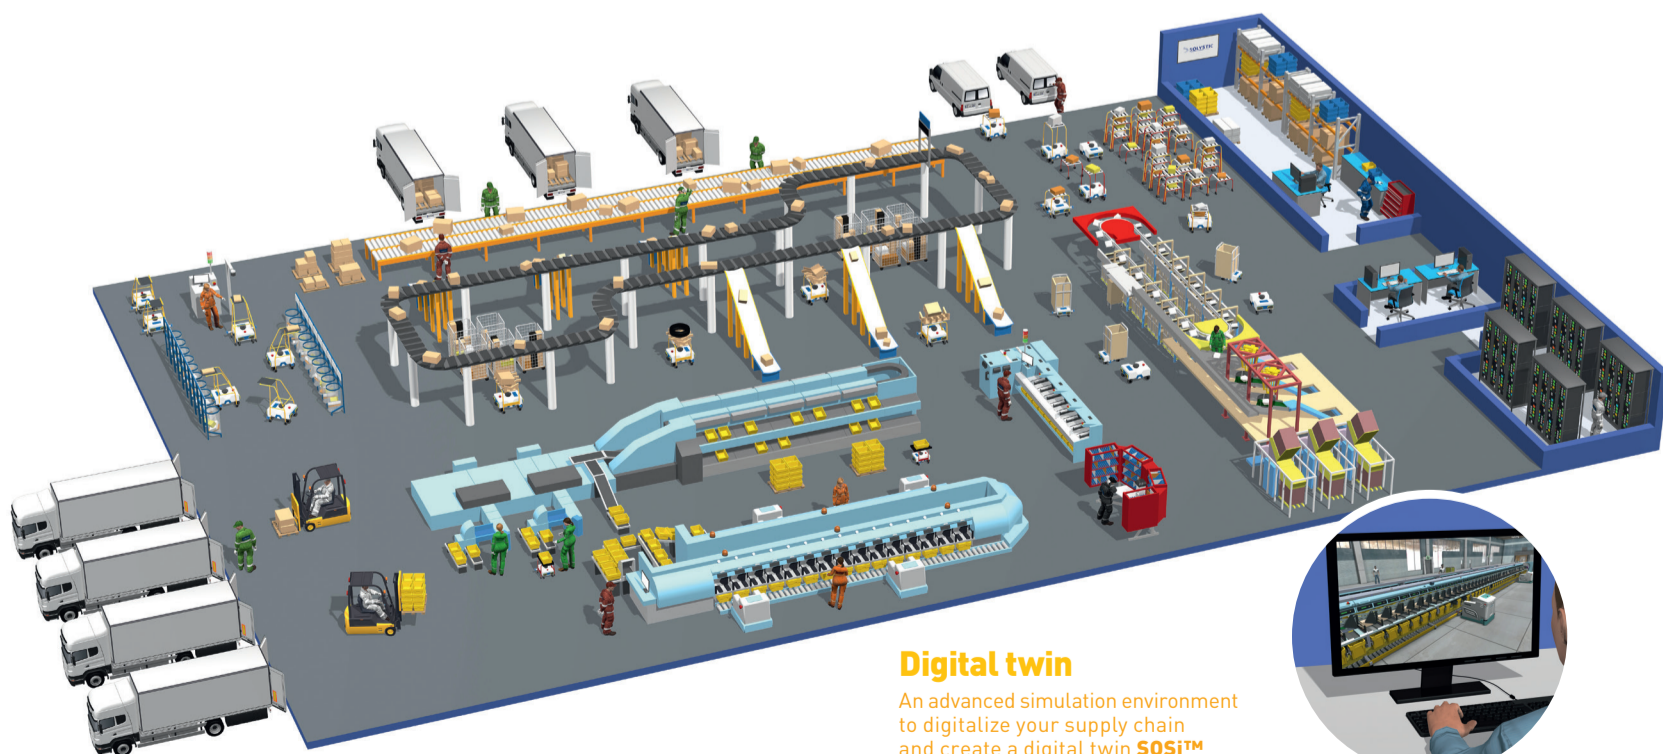

Soly™ Sort for sorting of packets, **Soly**™ Move for "smart" material handling (for example for products with large sizes or odd shapes that cannot be handled by traditional sorters) can fit into your space as you desire, easily provide automation, accuracy and improved working conditions and scale up or down according to the seasonal variations.

Lifecycle Services

We provide services throughout the entire lifecycle of equipment and IT applications. Spares supply chain, technical support, maintenance (also for 3rd party equipment), upgrade of legacy equipment for the extension of lifecycle.

Smart IT applications

Supervision and management systems, real-time delivery address recognition with high level of accuracy, webcoding, video-analytics application for tracking the products based on image processing.

Digital twin

An advanced simulation environment to digitalize your supply chain and create a digital twin **SOSI**™ of an industrial process.

We have a strong legacy of more than 4,000 pieces of equipment, delivered worldwide.

Our customers include the major postal and logistics operators in the world. Our solutions are successfully used

in **almost 30 countries:**

USA, Canada, France, Germany, UK, Italy, Spain, Portugal, Austria, Belgium, The Netherlands, Sweden, Denmark, Norway, Finland, China, Japan, Singapore, etc.

Based in France with the headquarters in Paris area, we are a subsidiary of the American group Northrop Grumman. SOLYSTIC employs around

500 well-qualified, experienced and highly motivated people.

OUR SKILLS: DESIGN OF BESPOKE SOLUTIONS, INNOVATION THAT PROVIDES A CONCRETE VALUE, MANAGEMENT OF COMPLEX PROGRAMS.
